XIANG CHEN

Master of Science in Computational Design, Carnegie Mellon University
email: xccxrvz@gmail.com| +1 4127190594

EDUCATION

Carnegie Mellon University — **Pittsburgh, USA**
Master of Science in Computational Design — 08/2024 - 05/2026

Hefei University of Technology — **Anhui, China**
Bachelor of Architecture — 09/2019 - 06/2024

INTERNSHIP

12.2025 - 04.2026 Daedalia — *Pittsburgh, USA*
• Growth Marketing Intern | Mentor: Michael Shang
- Paid acquisition: drove app installs through Reddit Ads at under $1.50 cost-per-install — roughly 60% below the ~$4 category benchmark via continuous creative testing and audience targeting.
- Organic & community growth: generated 400K+ organic impressions in two weeks through native, community-first content across target subreddits, building brand awareness for a consumer AI app.
- Creator marketing: sourced and evaluated TikTok creators for influencer partnerships using TikTok's creator tools, analyzing audience fit and performance data to shape outreach strategy.
- Funnel & measurement: built conversion funnels with event tracking and channel parameters (impression → click → visit → install) to pinpoint drop-off and inform content and acquisition optimization.
- Market & user research: ran competitive analysis and synthesized community feedback into user segmentation and feature recommendations; represented the product at GDC and indie showcases to gather market and competitor intelligence.
- Monetization: contributed to early pricing and monetization strategy for planned in-app purchases

09.2025 - 12.2025 **Locammend** — *Pittsburgh, USA*
• Product Manager & UX Designer Intern | Mentor: Catherine Li
- Analyzed user interaction patterns and multi-step funnels to identify friction points in recommendation workflows; produced visual summaries to support product decision-making.
- Designed relationship-graph visualizations to interpret "private recommendation + social graph" structures and improve understanding of trust paths.
- Built interactive prototypes illustrating behavioral flows and content relationships, enabling clearer communication with engineering and design teams.

05.2025 - 07.2025 **Shanghai Hello Puhui Technology Co., Ltd.** — *Shanghai, China*
• AI Product Manager Intern | Mentor: Kuang Zhiwei
- Built a metrics pipeline (exposure → click → adjustment → success) and partnered with data engineers to implement event tracking for an AI portrait app.
- Created internal dashboards comparing model behavior across lighting and pose conditions, helping the ML team identify performance anomalies and improve robustness.

PROJECT

05.2026 - 06.2026 **Reddit Community Intelligence Tracker** — *Pittsburgh, USA*
• Personal Build | Python, Supabase
- Built a tracking web app that monitors posts and discussions across target subreddits in near real time.
- Designed data-driven notification strategies and visual state diagrams to support clinician workflows.
- Authored structured prompt frameworks (COSTAR) and evaluation protocols for system refinement.

01.2025 - 05.2025 **"Fourth Trimester" Health System** — *Pittsburgh, USA*
• AI Prompt Engineer | Honda Research Institute
- Analyzed multimodal time-series data and applied statistical methods to detect and surface anomalies from noisy signals; translated findings into visual summaries and state diagrams so non-technical stakeholders could interpret patterns and act quickly.
- Built structured evaluation frameworks and metrics to benchmark system performance and guide iterative refinement..

SKILLS

Growth & Marketing Analytics: Reddit Ads, Google Ads (UAC), funnel & conversion analysis, A/B testing, event tracking, SEO/AEO, dashboards, performance reporting
Data & Tools: Python (Pandas, NumPy, Scikit-learn), SQL, statistical analysis, data visualization (Matplotlib, Plotly), Supabase
Product & UX: PRD writing, wireframing & prototyping (Figma, Sketch), usability testing, user & market research
Languages: English (Fluent), Mandarin (Native)
